| ___ 8. environment | h) a person who travels into space |
| ___ 9. astronaut | i) the world of land, water, air, and living things |
| ___ 10. invent | j) a computer world you can see and move in |

READING

1. In the future, people will have jobs we cannot imagine today. Technology is changing very fast. New tools, like robots and virtual reality, will create new kinds of work. Some jobs will help people live better, while others will explore space and the deep ocean.
2. Scientists believe that many jobs will focus on protecting the environment. For example, there may be 'climate engineers' who work to keep the Earth safe. Others may design drones to clean the air and water. Solar energy workers will also be important in the future.
3. Some of the most exciting jobs will be in space. Astronauts may live on space stations for long periods. There might be jobs for building houses on the Moon or Mars. The future will bring many chances for people to invent and explore.

COMPREHENSION

1. Why will new jobs appear in the future?
2. What will climate engineers do?
3. How might drones help the environment?
4. Where might astronauts live in the future?
5. What are two exciting things about future jobs?
